Vonage Crosses 2 Million Line Mark

Holmdel, NJ, September 5, 2006 – Vonage Holdings Corp. (NYSE: VG), a leading provider of broadband telephone service, today announced it has exceeded 2 million lines in service.

"Activating over 2 million lines is a milestone for both Vonage and the industry," said Jeffrey A. Citron, chairman and chief strategist of Vonage Holdings Corp. "As we continue to grow our business, innovation will be a key focus. To move the industry forward we must create tools that enable people to communicate when, where and how they choose, on their terms."

Utilizing its innovative technology, Vonage sets the standard for the new generation of phone service with residential and business calling plans:

Vonage Canada pricing plans and features'

- \$19.99/month - Residential Basic Plan – 500 minutes of local, toll and long distance calling throughout the 50 United States, Canada and Puerto Rico.
- \$39.99/month - Residential Premium Unlimited Plan – unlimited calling throughout the 50 United States, Canada, Puerto Rico, France, Ireland, Italy, Spain and the U.K., anytime, anywhere.
- \$55.99/month – Entrepreneur Pro Plan – 1500 minutes of calling throughout the 50 United States, Canada and Puerto Rico including a dedicated fax line.
- \$69.99/month – Entrepreneur Unlimited Plan – unlimited calling throughout the 50 United States, Canada, Puerto Rico, France, Ireland, Italy, Spain and the U.K., including a dedicated fax line.

- Features included at no additional charge in all Vonage plans:
 - Voicemail
 - Caller ID
 - Call waiting Call forwarding
 - Call hunt
 - Call transfer
 - Call return ('69)
 - Caller ID block ('67)
 - Repeat dialing
 - Area code selection
 - Number mobility
 - Bandwidth saver
 - Web-based account management
 - Voicemail retrieval and real-time inbound/outbound calling activity
 - International calling at significantly reduced rates
 - Tel Aviv 7 a minute
 - Hong Kong 6 cents a minute
 - Sydney 7 cents a minute

Vg-m

* VoIP 9-1-1 service has certain limitations versus traditional 9-1-1. See vonage.ca for details. Monthly rates exclude fees for premium services and taxes. International calls are billed per minute. Credit card & high-speed Internet required. Other restrictions may apply. See www.vonage.ca for complete Terms of Service & details.

About Vonage Canada

Vonage Canada is a subsidiary of Vonage Holdings Corp. traded on the NYSE under the symbol VG. Vonage Canada is an early pioneer of the Canadian Internet phone industry, setting the standard for pricing, features, call quality and reliability for the entire VoIP category. Vonage's award winning service is sold on the web at www.vonage.ca and through national retailers like Best Buy, Future Shop, London Drugs, The Source by Circuit City, Staples Business Depot/ BUREAU EN GROS, Office Depot, CompuSmart, Visions Electronics, Telephone Booth and WirelessWave. Vonage Canada is headquartered in Mississauga, ON. For more information about Vonage's products and services, please visit <http://www.vonage.ca> or call 1-877-272-0528. Vonage® is a registered trademark of Vonage Marketing. VoIP 9-1-1 service has certain limitations versus traditional 9-1-1. See vonage.ca for details.

Business IP Trunking Made Easy

In addition to Hosted VoIP services, IP5280 also offers easy-to-use and implement IP Trunking solutions that provide advanced VoIP features to existing PBX phone systems. IP Trunking provides the same unlimited local and long distance calling features as Hosted VoIP, and maintains all of your current PBX functionality without the cost and hassle of replacing your phone system. Replace your PRI connections and eliminate local and long distance charges with an integrated voice and data broadband connection. IP5280 can show you how to start your move to VoIP today.

Press Release...

Colorado's WavMax and IP5280 Team to Deliver Wireless Broadband VoIP Services to Small- and Mid-Sized Businesses

ENGLEWOOD AND LITTLETON, COLO., Oct. 19, 2006 - WavMax, a regional wireless broadband provider of voice video and data services, and IP5280 Communications, Colorado's business VoIP specialists, announced today an agreement to provide a portfolio of wireless broadband VoIP services to small and mid-size business customers across Colorado. The partnership brings together a powerful combination of communication services that delivers a business-grade alternative to the traditional phone company services along with high speed wireless connectivity, advanced IP calling features and as much as 50 percent savings off monthly phone bills.

Founded in 2000, the WavMax network provides the most far reaching service coverage available to businesses throughout Colorado's Rocky Mountain region and Arizona compared to any other carrier-grade, wireless broadband provider. The WavMax wireless network supports symmetrical broadband speeds from 1.5 Mbps to over 100 Mbps, providing both primary and backup network service connections for an enterprise business.

"Unlike most DSL or cable providers, WavMax provides commercial level, symmetric broadband services, and VoIP works best with symmetrical bandwidth when files are both sent and received at the same speed," said John Taylor, chairman and CEO of WavMax. "Just as wireless phones have replaced the traditional landline services of the phone company, so too is the newer IP-based wireless broadband network displacing the conventional hardwire networks; our business customers see improved reliability, flexibility and immediate cost savings. We are excited about partnering with IP5280's superior VoIP offerings for the Rocky Mountain business market."

Voice over Internet Protocol, or VoIP, is the new convenient way that uses a high-speed Internet connection to make and receive high quality phone calls with more manageability and functionality, and at rates significantly below the usual "old phone company." Together, WavMax and IP5280 offer symmetric T-1 service supporting VoIP, data and Internet applications, including unlimited long distance for businesses.

"IP5280 is Colorado's quality and price leader in providing VoIP services designed specifically to meet the needs of the business user," said Jeffrey Pearl, co-founder and managing partner of IP5280. "VoIP demands a high quality network connection like that provided by WavMax, and teaming with WavMax expands our service offerings to give our business customers more carrier choices."

IP5280 offers a range of unlimited local and long distance VoIP calling packages and data solutions that include Hosted VoIP and IP Business Trunking services providing full user mobility, unlimited local and long distance calls, and email integration. Advanced features include sending voicemail to your email inbox, simultaneous ring on multiple phones, automatic logging of calls, auto attendant that greets callers and routes calls to different employees and traditional features such as conference call and three-way calling.

About IP5280

IP5280 is Colorado's VoIP company, a next generation communications provider specializing in VoIP, converged IP voice and data services. IP5280 provides more than 100 Colorado businesses the most advanced IP solutions to meet all of their voice, data and IP networking needs. For more information, visit <http://www.IP5280.com> or Call 303-800-0000.

SimpleSignal Gives It Up for New Dealers

Get Free Phones and Free Hosted VoIP for One Year

See SimpleSignal at The Channel Partners Conference and Expo, booth #701

Dana Point, CA - SimpleSignal, a leading provider of VoIP solutions announces a new dealer incentive program worth \$4,000 for new dealers who sign up before March 30, 2007. The offer consists of four free Polycom HD IP650 phones and free SimpleSignal hosted VoIP service for one year. To take advantage of this new offer, new dealers must complete the SimpleSignal training and certification program, Polycom certification and sign the SimpleSignal agent contract by March 30th, 2007.

SimpleSignal will be exhibiting at Channel Partners Conference & Expo, sponsored by Phone+ Magazine. They will be located in booth 701. For more on the Channel Partners Conference & Expo visit: <http://www.phoneplusmag.com/channelpartners/vegas2007/home.html>

According to SimpleSignal president David Gilbert, "This new promotion is an exciting incentive program that is like nothing else in the industry. We wanted to create a program that would entice new agents to see how simple and rewarding it is to work with SimpleSignal while also giving them a chance to make some big money. We feel confident the program will give agents the motivation they may need to continue their great efforts through 2007."

To become a SimpleSignal reseller, call Aric Applefield: 949-429-4760 or Michael Steri : 303-242-8614 or by emailing: sales@simplesignal.com. Call toll-free at 800.873.7670.

About SimpleSignal

SimpleSignal is a facilities-based complete network provider of business VoIP. The company's enterprise-grade service is designed specifically for small to medium sized businesses, combining voice and data, hosted PBX, long distance and conferencing into one powerful, cost effective communications solution.

SimpleSignal delivers more capabilities than on-premise PBX systems, with greater flexibility, simplicity, and personalized service. No businesses of any size can leverage the power of advanced IP communications technology, improving business productivity, while significantly reducing overall telecom costs. SimpleSignal is privately held and headquartered in Dana Point, CA. SimpleSignal services are deployed in over 40 states and 6 foreign countries. Interested channel partners may contact SimpleSignal directly by calling Aric Applefield: 949-429-4760 or Michael Steri: 303-242-8614 or by emailing: sales@simplesignal.com. Call toll-free at 800.873.7670. SimpleSignal, Simple Signal, Simple44, 45-45 and SimpleSIP are service marks of Simple Signal, Inc. More information can also be found on the SimpleSignal website, <http://www.simplesignal.com>

###

SimpleSignal Announces The **45-45-45 SM** Hosted VoIP Sales Incentive Program

\$4500 to any SimpleSignal agent that sells 45 seats in 45 days

Dana Point, CA – SimpleSignal, a leading provider of VoIP solutions announces a ground breaking VoIP agent incentive program called 45-45-45 SM. Agents will receive \$4,500 if they sell 45 SimpleSignal hosted VoIP seats in 45 days. In addition to discounted hosted PBX pricing, SimpleSignal includes the following features free of charge:

- Outlook Dialing Toolbar
- Music On-Hold
- Administrator Training
- Auto Attendant
- Softphone Headset with each softphone purchased

According to Serling Davis, CEO of Innovative Teknology (<http://www.ntekno.com>), "45-45-45 SM will pump up the volume in hosted VoIP. I am constantly looking for great ways to save my customers money and bring them new technology at the same time. 45-45-45 SM is just the incentive I need to work hard this year and get going in 2007."

According to SimpleSignal president David Gilbert, "This new promotion is an exciting incentive program that is like nothing else in the industry. Towards the end of the year many dealers can tend to lose steam. We wanted to create the opposite effect, so we developed the 45-45-45 SM program. We feel confident the program will give agents the motivation they may need to continue their great efforts through the end of the year and into 2007."

45-45-45 SM is available immediately in nearly all cities in the U.S. and Canada with unlimited incoming and local calls starting at \$35 per seat per month including the free bonus features mentioned above. Discounted international rates apply. Go to <http://www.simplesignal.com/independent-agent-special.htm> for more info. 45 seats must consist of at least 4 separate customers. Bonus offer ends January 31, 2007. Other restrictions may apply. For more information, contact sales@simplesignal.com.

###

SimpleSignal Launches New SimpleSIP **SM** Trunking Solution

See SimpleSignal in Booth 401C at ISPCON – November 7-9 – Santa Clara <http://www.ispcon.com/>

Contact: Aric Applefield at 949-429-4760 or Michael Sterl at 303-242-8614 sales@simplesignal.com – <http://www.simplesignal.com>

Dana Point, CA – SimpleSignal, a leading provider of Voice over Internet Protocol (VoIP) solutions announces SimpleSIP Trunking Solutions. SimpleSIP is a Session Initiation Protocol (SIP) trunking solution that allows any SIP-compatible IP-PBX (Internet Protocol Private Branch Exchange) or compatible traditional Time Division Multiplexed (TDM) telephone equipment to communicate with the SimpleSignal softswitch. SIP Trunks enable seamless voice and data convergence using an end-to-end SIP VoIP connection to a network of carrier gateway or other SIP-connected enterprises. SIP adds connectivity to the Public Switched Telephone Network (PSTN), data connectivity to the Internet and

intra-office and inter-office connections to SIP-compatible systems.

Simply put, SIP trunks simplify network management and optimize network expenditures. With SIP trunking, there are no limitations on the number of internal or partner Communications connections. In other words, a small or large enterprise can purchase SIP trunks for the number of concurrent calls they support, rather than buying each individual employee their own line. SimpleSIP provides customers with a seamless integration of traditional circuit-switched interfaces and emerging IP-switched interfaces. This simple approach to integration enables the user to easily convert from traditional circuit-switched telephony legacy systems to next-generation IP systems, including wireless networks supported by Wi-Fi (Wireless Fidelity), Wi-MAX (Worldwide Interoperability for Microwave Access) and IMS (IP Multimedia Systems).

"SIP trunking finally brings business class VoIP connections to organizations of all sizes," commented Paul C. Daubitz, President of ATI Tele Management, a leading telecom consultancy. "Whether you are a single location with virtual works or a multi-location enterprise, the ability to have no-cost N-way multi-party conference calls for sales meetings, training, events and emergencies is powerful," Daubitz added.

According to SimpleSignal President David Gilbert, "SIP business trunking is an exciting development. SIP brings the next level of VoIP performance to any enterprise. Since there is direct access to our VoIP gateway services, a small company or large enterprise can have all the features of VoIP on traditional telephone equipment without upgrading their equipment to IP or upgrading existing infrastructure."

Some of the key features in SimpleSIP are:

- Unlimited inbound trunking capacity – scale as you grow – here, there, anywhere
- Free on-net calling – toll-free intra-office connections and inter-office connections to SIP-compatible systems
- Free on-net conference calling
- Low cost outbound domestic and international long distance calling rates
- Full E911 compatibility
- Detailed call accounting - call history and logs
- Guaranteed Quality of Service (QoS)
- Supports G.711 and G.729
- LNP - Local Number Portability included
- Voicemail included
- Unified messaging included
- N-Way Conference calling included

More information on the complete list of features is available by calling SimpleSignal.

The new bottom line: SIP trunking makes sense. SIP trunks have tangible benefits in hard lower Total Cost of Ownership (TCO) savings and soft-dollar operational efficiencies for businesses. Specifically, SIP trunking reduces the monthly recurring cost of separate PSTN and data circuits to the premise and to distant on-net users, suppliers and call center agents. With SimpleSIP, the number of TDM T1 and PRI interface are reduced as hundreds of VoIP calls can be processed with the same hardware footprint as a single T1 interface. In addition, SimpleSIP adds significant savings on long distance rates and local toll charges. SimpleSIP also brings a seamless connection to a Multi-Protocol Label Switched (MPLS) backbone network with more than two million voice-enabled trunks and SIP gateway.

SimpleSIP is available immediately in nearly all cities in the U.S. and Canada with unlimited incoming and local calls starting at \$25 per trunk per month including all features mentioned above (features are subject to change without notice and other contract restrictions) and a charge of two cents (\$0.02) per minute for long distance in the US and Canada. Discounted international rates apply. Contact SimpleSignal for detailed specifications.

Businesses can choose from a variety of SIP-compatible communication equipment manufactured to create a converged communication network. Major equipment manufacturers that are supported on the SimpleSignal IP trunking Network include: Cisco/Linksys, Avaya, Nortel, ShoreTel, NEC, Mitel, Siemens, Alcatel, Asterisk, Adtran, Carrier Access, Talkswitch, Polycom and others. Check with the manufacturer for specific feature support. For more information and resources on SIP, please refer to the SIP Forum at <http://www.sipforum.org/>, the SIP Center at <http://www.sipcenter.com/> and other resources.

Business VoIP Provider, SimpleSignal Announces New Senior Engineer

Dana Point, CA (August 29, 2006) - SimpleSignal, an emerging leader in business VoIP solutions, is pleased to announce it has named Jeff Pelletier Senior Engineer, effective September 5th.

Mr. Pelletier brings an in-depth and high level experience to SimpleSignal. He has over 13 years experience in telecommunications that spans both traditional voice and VoIP technologies. His background includes Nortel, MCI, and Level 3 Communications, amongst others. While working with these companies he has become an expert in voice network architecture, design and implementation.

Jeff's recent work with session border controllers at Level 3 Communications resulted in 2 patents pending relating to session border controller and CALEA functionality.

"The business VoIP market is rapidly growing, creating unlimited new opportunities for SimpleSignal," said Preston Wilson, CEO, SimpleSignal. "The addition of Jeff Pelletier to our engineering team will help us take advantage of those opportunities and reach all of our goals."

Pelletier said, "I am delighted to join a company, like SimpleSignal, with the highest standards of integrity and a spirit of innovation. I look forward to building on the best in class services offered at SimpleSignal."

About SimpleSignal

SimpleSignal is a full service business VoIP provider. The company's enterprise-grade service is designed specifically for small to medium sized businesses with four to 100 phones, combining voice and data, hosted PBX, long distance and conferencing into one powerful, cost effective communications solution.

SimpleSignal delivers more capabilities than on-premise PBX systems, with greater flexibility, simplicity, and personalized service. Now any small business can leverage the power of advanced IP communications technology, improving business productivity, while significantly reducing overall telecom costs. SimpleSignal is privately held and headquartered in Dana Point, CA. They are deployed in 26 states and 6 foreign countries.

New WiFi Phone Makes Your Office Phone Mobile Linksys WIP 300 - Take it anywhere, use it anywhere

Dana Point, CA (August 20, 2006) -The WIP 300 is the "latest and greatest" VoIP WiFi phone on the market. The tiny phone works the same as your office phone, but its mobility makes it much more efficient. The WIP 300 eliminates the need for an office phone and a cell phone, because it's designed to work as both. The phone is small and light making it easy to carry with you, and its use of VoIP technology allows you to stay connected to the office as if you were using your traditional desk phone.

Linksys WIP300

The WIP 300 is easy to configure, has excellent sound quality, and a long battery life, with the ability to charge using a power cable or with the usb port on your lap top. More information on the Linksys WIP 300 - First Looks: WiFi Phones That Actually Works (link to <http://vox111a.com/name-News-article-sid-175.html>)

Business VoIP Provider, **SimpleSignal**, Unveils **New Website**
 SimpleSignal unveils its new, information-filled and easier to navigate website

Dana Point, **CA** (August 8, 2006) – SimpleSignal's new and improved website was brought to life today. The website, designed by Jeff Klem, Creative Director at Remedyssoft, is now easier to navigate and contains more information on Business VoIP, Channel Partner Program promotions, and includes valuable links for partners to a host of marketing and sales materials.

"We wanted the website to better reflect the energetic and supportive culture at SimpleSignal, while also making it easier to navigate for our Channel Partners and clients," explained CEO, Preston Wilson. "Our fully optimized site now contains more information about SimpleSignal and Business VoIP for our prospective clients, while creating better access to our ever-expanding wealth of marketing and sales materials for our valued Channel Partners."

About SimpleSignal

SimpleSignal is a full service business VoIP provider. The company's enterprise-grade service is designed specifically for small to medium sized businesses with four to 100 phones, combining voice and data, hosted PBX, long distance and conferencing into one powerful, cost effective communications solution.

###

Business VoIP Provider, SimpleSignal, Celebrates its Largest Revenues Ever!
 The results are officially in: July was a great *month* for SimpleSignal!

Dana Point, CA (August 2, 2006) - SimpleSignal's success is more evident than ever this past month. With the closing of July's accounting numbers, they've seen dramatic percentage increases in all the right places.

SimpleSignal had a nearly 40% increase in top line revenue over June, and exceeded their July revenue projection by almost 14%!

Dave Gilbert, Founder and President of SimpleSignal, said, "Our excellent numbers this month were a result of, first and foremost, our great team of people who genuinely care about SimpleSignal's prosperity, and our ability to hold the line on expenses through our strict cost control combined with a huge change in customer receptivity and willingness to adopt VoIP." He continues, "The growth of SIP Trunking and our agents and wholesalers growing their businesses have also contributed to the success this past month."

Gilbert and the rest of the team at SimpleSignal are confident they can keep up the growth. VP of Business development, Aric Applefie commented, "With the rapid and continuing growth of the VoIP industry, and the dedicated team we have, I am fully confident that SimpleSignal's success will only grow from here."

About SimpleSignal

Trends & Forecasts

North American Residential VoIP Market to Increase Growth

By Newsdesk
Jul 19, 2005

[Email this article](#)
[Printer friendly page](#)

Voice over Internet protocol (VoIP) service providers are gearing up to deal with the substantial increase in demand as well as challenges associated with moving into the mass market. They have to address the issues of pricing, regulatory uncertainty, and competition to be successful in the big league.

New analysis from Frost & Sullivan on North American Residential VoIP Markets reveals that market revenue totaled \$295.1 million in 2004 and expects to reach \$4,076.7 million in 2010.

Mass-market customers, unlike early adopters, are not attracted to new technology. They must be convinced that IP telephony is superior to plain old telephone service (POTS) and can provide access to 911 networks.

"Customer apprehension about the value of the service can be overcome by increasing awareness about the advantages of VoIP over traditional telephony," says Frost & Sullivan Senior Analyst Lynda Starr. "The issue of providing timely access to 911 can be alleviated through industry cooperation."

Once all issues are resolved, VoIP-based services will burgeon due to greater broadband penetration, service providers' need to increase revenue, and availability of low-priced services.

While potential subscribers are likely to show initial interest in IP telephony due to its cost savings, they will choose the service for additional features such as virtual numbers and videoconferencing.

VoIP also enables advanced features including Web-based call logs, click-to-dial, and scheduling phone calls. These options increase customer satisfaction and offer providers additional revenue streams.

However, some participants such as the incumbent telecommunications service providers correctly perceive competition from new IP telephony providers as a threat to their revenue. In the past, incumbent local exchange carriers (ILECs) in the United States have lost 15.0million access lines to various competitors. Many of these lines are second lines used by teens, telecommuters, and for data lines.

"Residential subscribers are likely to replace second lines with wireless or VoIP; the benefits of VoIP include lower cost, additional features and ease of use," notes Starr. "If an ILEC offers

Real World Networks Biz
Newsletter

The residential VoIP market expects to witness significant growth in the customer base and revenue despite residential VoIP subscriptions still being in the nascent market stage.

Service providers that also deal in cable, Internet service provider (ISP), and non-telecom operations are likely to enter the market, and thereby drive the growth of VoIP lines from 1.5 million to more than 18.0million during 2004-2010.

North America Residential VoIP Markets is part of the IP Communications subscription and discusses the opportunities and challenges faced by virtual network operators, incumbent providers, cable operators, and other new service providers targeting the market with VoIP-based services. It also enables companies to align their positioning strategies to benefit from the changing market and obtain maximum return on investment.

Frost & Sullivan serves an extensive clientele that includes Global 1000 companies, emerging companies, and the investment community by providing comprehensive industry coverage to reflect a unique global perspective and combines ongoing analysis of markets, technologies, econometrics, and demographics.

Enterprise VoIP adoption in North America will more than double in 2010

BOSTON, Massachusetts, May 10, 2006—While voice over IP is still in the early phase of adoption, it's starting to go mainstream, says a new study from Infonetics Research, *User Plans for VoIP: North America 2006*.

In the three years Infonetics has conducted VoIP adoption surveys as part of their larger study on VoIP usage, one trend is clear: the number of small, medium, and large organizations that plan to deploy or at least evaluate the technology is rising steadily. At the same time, awareness of available products and services is increasing, and while awareness doesn't necessarily translate into deployments, it is one of the first obstacles any new technology must overcome.

"Our forecasts show a continued steady uptake of VoIP over the next few years, with adoption following a relatively straight line, not the S-shaped curve typically seen in the adoption of emerging technologies," said Matthias Machowinski, directing analyst at Infonetics Research. "That's because VoIP uptake is largely tied to an organization needing a new phone system, and when companies buy a new phone system, they generally invest in the latest technology, which happens to be VoIP-based now. By our estimates, almost half of small and two-thirds of large organizations in North America will be using VoIP products and services by 2010."

A number of companies that are moving voice network investments aggressively from TDM to VoIP are actually decommissioning their legacy TDM PBXs, the ultimate show of confidence illustrating that VoIP has become enterprise-grade.

Study Highlights

- 36% of large, 23% of medium, and 14% of small North American organizations interviewed were already using VoIP products and services in 2005
- VoIP adoption will triple by 2010 among small organizations in North America
- The top drivers for deploying VoIP are having an integrated phone system across multiple locations, scalability, operational cost savings, and converging voice and data networks
- Next to basic voice, money-saving long distance/toll bypass is the highest ranked application for VoIP
- The percent of users at respondent sites accessing VoIP over wireless LANs grows from 5% in 2006 to 20% in 2008
- Among respondents using in-house VoIP, the most commonly used protocols for their IP phone endpoints now and in 2008 are SIP and the 4 versions of H.323
- Cisco, Avaya, and Nortel, the top PBX manufacturers in North America, head the list of manufacturers of VoIP products currently in use (IP PBXs, gateways, and IP phones)
- Organizations spent an average of \$47.667 on hosted VoIP in 2005, growing 34% to \$63,799 in 2007; for managed CPE, expenditures grow from \$10,865 in 2005 to \$28,367 in 2007

Infonetics conducted in-depth interviews with 240 small, medium, and large organizations that use VoIP products and/or services now or will by 2007, an additional 450 shorter interviews to determine VoIP adoption rates; and 150 exit interviews to determine why organizations are not deploying VoIP. Most respondents use in-house VoIP some use managed VoIP services, and others use a combination of the two.
