

The Internet is a Public Asset

Public airwaves are just that -- PUBLIC.

They do not inherently belong to phone companies and cable companies and other special private interests that already have control over more than enough. What we need is open access, competition, and innovation.

Above all we need to protect the rights and access of small, private, personal interests, individual taxpayers to whom the internet belongs as a public institution.

restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.
