

Bridging The Digital Divide

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation to ensure access to the political, educational, and economic opportunities afforded by the Internet are not doled out at the discretion of an exclusive few.

This new wireless spectrum must be open and neutral so that America can build a better Internet for those who are underserved in the status quo.
