

I travel quite a bit and it is embarrassing how outdated and arcane our Internet infrastructure has become compared to that of our European counterparts.

The government must protect our airwaves from the same corporate gatekeepers that have stifled innovation and competition in Internet markets. They are the reason we are so "unenlightened" when it comes to Internet access.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need MORE competition and innovation, not more of the same. Show some backbone and do not cave to the lobbying of these corporations who do not act in the public interest.

This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.
