

As a citizen of the USA I am disappointed to see that we are rapidly becoming a follower in technology. I would like to see the FCC be more proactive in promoting technologies that would allow us to regain the innovative position that we are capable of in the world economy. Allowing at least a portion of these airwaves to go into the public domain would be a great first step in the right direction. I wholeheartedly agree with the generic letter that follows provided by savetheinternet.com. Please help our nation rise to a new level of competition in the technology arena of the world again.

Thank you,
Eric Taylor

The government must protect our airwaves from the same corporate gatekeepers that have stifled innovation and competition in Internet markets.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.
