

Here in Iowa, access to affordable internet service continues to exclude some people from using computers for personal & business reasons.

The government must protect our airwaves from the same corporate gatekeepers that have stifled innovation and competition in Internet markets.

Making more choices available, even in rural areas, would allow underserved areas to access service & connect their schools, businesses & families to the world.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

We must all work for the common good; this world does not need another WalMart type corporation powered by the greed of owners.
