

The government must protect our airwaves from the same corporate gatekeepers that have stifled innovation and competition in Internet markets.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We cannot imagine the future advances technological innovation will make, nor can predict the potential application of new technology in our public and private lives. Don't allow the markets and interests of today to stymie future advances and innovation by locking down the spectrum.

This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone. In addition, the FCC should take special consideration of the importance of insuring Net Neutrality in the spectrum.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 50 MHz of spectrum for open and non-discriminatory Internet access.
