

The government must protect our airwaves from the same corporate gatekeepers that have stifled innovation and competition in Internet markets.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

We've had to be warned at least a half dozen times in the last year about some large telecommunication company trying to mess with the Internet Access. Why is it when corporations have a chance to do the right thing, they invariably do not do it. They have to be policed because they refuse to be Responsible. If given the chance they will screw over consumers every time. Your job is to protect the consumer, so do your job and keep internet access available to everyone and keep the monopolies out. I pay \$22 a month with MSN to get poor dial service. They're the 6th company I've tried. All of them were dysfunctional and hard to deal with, mostly because they're huge goliaths where the left hand doesn't know what the right hand is doing. Problems just do NOT get solved and cable companies like Comcast are charging \$55.00/month for their high speed. consumers are already getting raked over the coals, and you seem intent on making it worse.

Another Watchdog that can't be counted on.
