

The government must protect our airwaves from the same corporate gatekeepers that have stifled innovation and competition in Internet markets.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

The history of the corporations in phone and cable services has shown a lack of innovation. It has been the creative minds of small companies and individuals who have provided ideas which have resulted in many improvements to internet uses and services.

I strongly request that the FCC provide at least 30MHZ of spectrum for open and non-discriminatory Internet Access so the creative minds can continue to develop exciting innovations in this area of technology.

I look forward to your timely review and feedback on this issue. Your review and action on this issue is appreciated.
