

The government must protect our airwaves, allowing the FREE ENTERPRISE system to prevail and not allow the same corporate giants (e.g., AT&T), that have prevented growth and allowed stagnation, to control these markets and do the same to this industry. The U.S. is falling short compared to the rest of the World in technology due to the corporate giants who prevent healthy competitive growth and creativity.

When an industry controls everything, there is no need to change....competition forces creative advancement and our Country NEEDS some form of advancement to become a viable competitor in the 21st century.

This competition creates jobs and economic growth that we desperately need in order to pay down the national debt and keep the middle class strong and growing.

To restore America's leadership in high speed Internet services, the FCC must ensure that those wanting to enter the internet service market have an equal opportunity to compete without being blocked by the current giants that control the telecommunications industry. It would be a big mistake to hand over these airwaves to the very same phone and cable "GIANTS" that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet through healthy competition for everyone, a better job market and a better economy.
