

An open access internet is extremely important to me personally. I believe it to be critical in achieving self-empowerment & social justice critical to a healthy democracy. The FCC should be working on expanded internet access & putting rules in place to insure equal access & net neutrality. Please don't give anymore away to private companies. This trend is effectively destroying individual voices, power & access. Without strong dissent & diverse points of view, systems become stagnant & impede or shut down the innovation & progress that privatization is supposed to encourage. Please don't undermine our democracy any further by give aways in this important arena.
