

The government needs to protect our airwaves from the same corporations that have stifled innovation and competition in Internet markets.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

For example, I attend Delta Charter High School in California. Most of our work utilizes the internet using a program called NovaNET. Everyone, and I do mean everyone, that has been to DCHS has a story of how this school has changed their life. If you don't stop this advancing noose on the internet, our school may no longer be able to help us in the future!
