

The internet has been developed this quickly because all kinds of people have participated in garages and basements and homes all over the country...Please don't limit the progress and access. We pay companies to provide us a service... not make communication decisions for us....They need to be replaced if that is their plan. They work for us... we pay them. I don't remember ATT giving me one cent for anything nor did I elect them to run things... and last I knew GOD did not die and leave them in charge. We need more access and opportunity for the poor to participate... not more control for the wealthy commercial bottom line. Timothy Brener-Lee(who is one of the main creators of the web), said this before congress not long ago. The government must protect our airwaves from the same corporate gatekeepers that have stifled innovation and competition in Internet markets.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.
