

Please do not cap the funds for rural cellular service. Our customers need rural cellphone service, even the customers that live in cities. Without towers in rural areas, it is virtually impossible to fully satisfy the customer because they want to give their business to a growing business and they need cellular service everywhere they go, city or rural area. Our main goals are to make our customers happy and to grow as a business, and we can't do either one if our coverage area stops where it's at now. Please don't take the funds away. We all depend on our cell phones, especially in emergencies and we need towers for that reason. Thank you for your time to hear my request, I appreciate it. :-)
