

The rural parts of America need to keep up with changing technology in order to do business with the rural crowds, land based telcoms are doing a terrible job of this, Verizon and Comcast being the worst culprits of promising to expand high speed and reliable upgrades, as signed to bill by President Clinton in 1998, they have yet to come through. However rural cellular companies and locally owned telcoms can give better, more reliable and newer services that people enjoy, to continue this service the Universal Service Fund must not be capped or discontinued.
