

I find the Congress and FCC's blocking and delaying of this merger to be anti-constitutional and suspect given the large amount of money terrestrial radio is sinking into killing satellite radio.

Satellite radio is a premium service, much like HBO and other pay networks, and does not travel over the public airwaves and should not be under your jurisdiction.

Furthermore, the "anti-competitive" argument is utter hogwash given that satellite radio is and always will compete with terrestrial radio, a mature and free medium that already has a massive market share and devices in every home.

Please approve this merger as soon as possible or I shall do my best to ensure that everyone involved is drummed out of public life and never elected to anything so much as dog-catcher.
