

There IS NO competition for Internet Access

For the FTC to decide against THE PEOPLES government supporting Net Neutrality by saying "let the market resolve it.." is a scandal and an abdication of their responsibility.

Internet access comes in one of TWO ways. Cable or phone lines. And a customer doesn't switch back and forth between the two like changing a channel on a TV. There IS NO market competition to promote innovation. Net Neutrality is what will promote innovation. That is what has brought the Internet this far. DON'T DESTROY THAT.
