

SAVE THE PEOPLE'S INTERNET

SAVE THE PEOPLE'S INTERNET!

Remember when the Internet was shamelessly sold to the public as an unlimited information resource free of commercial advertising?

Now the "Information Highway" is almost as clogged with advertising and spin as TV, "talk radio" and print media.

What should happen is that a gigabit/sec/user Public Internet should be provided to every resident of the USA, and maintained at public expense, with all for-profit corporations legally prohibited from using it for any purpose.

The for-profit corporations and wealthy individuals can well afford to run their own for-profit Internet. There will be ample commercial motivation to provide free gateway access to customers from the Public Internet.
