

## Keep it Free - Save and Keep Network Neutrality

Net Neutrality is essential to free speech, equal opportunity and economic innovation in America...

And that's where the generic part ends. We the People would like you to Not let the big companies sell favoritism treatment on the Internet. If that happens the little guy, be they running a web site on DSL, or someone blogging online, or someone conducting peer-to-peer communications such as Skype Voice Over Internet; will not (or to a lesser extent) be able to communicate in a fair manner.

The Internet was built upon interoperable protocols which allowed any computer to connect. Any computer to be treated as an equal, be it a PC at home, or a Web Server at a hosting facility. I wouldn't want end users, or even a hosting facility, to have to pay "extra" just to be seen (or seen as good others) as well as a bigger company with deep pockets that can afford to pay off the big gun networks to let them have preferential network treatment.

Please protect and keep network neutrality on the Internet. I think this is vitally important to many young companies and individuals.

Thanks for listening. We're out here.
