

The government must protect our airwaves from the same corporate gatekeepers that have stifled innovation and competition in Internet markets.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

I try not to think of all the people who have been hurt or died because telecoms made it so hard and confusing for elderly in the 80s, 90s, and now for them to have a simple landline telephone. It never ends, there has been no enforcement on the radio waves owners to follow their contract to provide what the public needs and wants, like emergency warnings on tsunamis, earthquakes, etc. And on and on. Not more of the same.
