Re: Free Broadband Internet Access

Mr. Chairman:

The FCC has the opportunity to allow a monumental step forward in internet provider service. M2Z has submitted an application to the FCC for establishment of nationwide free broadband internet which, if approved, will revolutionize the availability and usability of the internet in this country. I urge the commission to give prompt and favorable consideration to this proposal.

Maywood would benefit in many ways from having free broadband internet services. Our education system would clearly benefit by utilizing this free service. A nationwide broadband system would greatly enhance their ability to utilize the internet

Each elected official has a responsibility to encourage and promote development of small business. The internet plays a huge role in giving these businesses access to world markets. Free access to broadband internet could be instrumental to the success of these small businesses.

The internet has proven to be an essential means of communication for community leaders, emergency service providers and our citizens. Universal connectivity to broadband internet is important to our future growth and prosperity

The FCC currently has a proposal before it to allow nationwide free broadband internet access. I urge the commission to give favorable consideration to this proposal

Sincerely,

Thomas Martin, Councilmember
