Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

Sincerely,

Steve Downing

I don't see why I have to lose my current service provider in order to acquire a new communication device. That's like being told you can only get NBC programming on Zenith television sets. We wouldn't accept that and we shouldn't have to accept deals that limit access to new technology.

Sincerely,

Christina Moxley
