

Please help protect local and diverse radio by adopting the proposal described in MM Docket No. 95-31 to limit the number of applications for the NCE FM New Station Applications in the October 2007 filing window.

By limiting the number of applications that an entity can apply for, it will protect local voices and prevent bulk filers from dominating this segment of the FM dial. The Commission's commitment to localism and diversity will help be assured by creating a limit that will encourage a wider pool of applicants based locally in their communities.

I strongly urge you to adopt the proposal described in MM Docket No. 95-31 to limit the number of applications from any single party to ten. If the FCC values diversity of ownership and local ownership, as they've demonstrated in the point system, it's inconsistent to allow one organization to apply for thousands of licenses around the country.
