Dear Federal Communications Commission,

Dear Rep. Kanjorski and the Director of FCC,

I am concerned about corporate monopolies in general, and this issue in particular. Freedom of information is very important, and although this does not appear to directly impinge on freedom of information, given our increasing reliance on web-based sources, I am concerned.

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Thank you for your attention to this letter.

Sincerely,

Gail Cabral

2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

We don't need these 'invisible' monopolies in today's or any other day's economy!

Allowing these practices to continue only stifles research and development of new products into an open economic environment.

Isn't it time you all start looking out for the people's interests again?

Sincerely,

Tim Sandison

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies to shackle useful technology to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace, without contracts that create stifling restrictions.
3. The freedom to access any content or services we want through our devices.
4. The end to two-year cellular contracts with penalties that are larger than the initial benefit given to the customer. For example, if I change my current contract, I am required to sign a new two-year contract. This is unreasonable restriction for almost no consideration on their part.

These true open access standards should apply to the entire wireless market.

Sincerely,

David Solberg

Dear Federal Communications Commission,

This represents only a fraction of the larger picture involved here. We the people demand freedom, our Constitution guarantees it! There is a great body of precedent regarding the unlawfulness of monopolies like this, don't you forget it. THIS is America! Corporations are NOT entities. For as long as they continue to be unlawfully regarded as entities, they should have the same vote power as only one person. One person, one vote.

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

Dear Federal Communications Commission,

Dear FCC and Michael Capuano,

The Free Press text below I agree with immensely. But first, yes, I really want to make a meaningful rant, from the heart.

We (isn't there a human "we" somewhere???) are at a REAL consciousness crucible. With the 700 Mhz bandwidth, as with net neutrality, let the internet be open and democratic without stifling corporate control and selective advantage over channels, devices, connectivity -- and therefore content and the distribution of its exposure.

Please get it !! You are human beings and individual personalities. *And this is our life that we share. We are a community of communications-capable individual personalities who can learn from each other. We are capable of individual learning and of social learning. But, Please -- no more corporate channeling of our minds! Let us learn and grow freely.*

Corporations can create the gadgets But NEVER NEVER NEVER may they create our minds and our contents and our own intentional networks, and our network access choices, and they have NO BUSINESS trying to control them. NO BUSINESS!

And needless to say they have NO LEGITIMATE AUTHORITY as personless, unelected, virtual immortalities -- and you would even think of letting human life and relations and inventiveness and co-responsibility and encounter - the worthwhileness of it all - be replaced by a dry, soulless corporate order. Rhetoric? No, this is REAL life. Corporations are UNELECTED, and have no right to hold so much power over us -- they do not represent us or our real interests as humans, no matter what the easily-managed/manipulated, and thus NOT sovereign, consumer market lets them get away with, from positions of gross, unearned, never legitimately unauthorized locational advantage. WAKE UP ! Breathe fresh human oxygen, not corporate monoxide.

All these issues are related --- internet neutrality, 700 mhz wavelength usage --- The possibilities of content belong to ALL of us, and EACH of us. NO CHANNELS, GATES, MIND CONTROLS allowed. NONE. NONE. NONE! Corporate power and profits from monopolization, or token compromises short of that, and the rich individuals who direct and glom off of same, are UNEARNED - repeat, UNEARNED! - in terms of real societal contribution, and of work in proportion to reward, or of merit of any kind. LOCATIONAL ADVANTAGE given to them privately, from OUR shared natural, including electronic, resources, and at our expense and loss of opportunities, so that we are being merely manipulated with tokenism ... on and on ... is just plain immoral.

Let's be real, grown up people. This time, let's get it, at

last. Let's GET IT! Let's get a real LIFE !!

The corporations are getting paid for their devices, no problem, but what is NOT for sale is our freedom of content expression and discovery over the internet (as well as in the rest of our NON- corporate, real human lives). Kick the undeserving, unelected corporations OUT.

OK- now FREE PRESS's good text message, which I fully agree with, and you doubtless will see many times, IS THIS:

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

Dear Federal Communications Commission,

These monopolies make it expensive to change services and phones to get different features, areas of coverage and capabilities.

Surely if I buy a phone I should be able to change providers for cheaper or better rates, stronger or faster signals and better service, and not be penalised for that.

My wife and I just changed service providers as we need service in the Bahamas because we work on boats. This cost us a lot of money, due to these market entrance barriers.

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

Dear Federal Communications Commission,

It is such a shame that the rest of the world is leaps and bounds ahead of the US when it comes to cellular networks, service, and devices. It is time to bring us into the current century by allowing the consumer greater control over what devices they can use and what they can do with them. Please free us from the unnecessary shackles placed on us by crippled phones and bad reception by allowing customers to choose their phone and provider separately and to change their plan if the reception is not as advertised.

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

Back before the dawn of time, AT&T used to restrict what could be plugged into their network. Then they relaxed a bit and finally with deregulation, phone companies ceased to restrict what could be plugged into their networks.

It's time to wake up the Cell Phone industry and insist they do the same. The United States is rapidly becoming a 2nd world country (a 1st worlder slipping into a degraded state) having 2nd best in lots of areas. It would be nice if government took an active role in fostering competition when that was needed (allowing openness in consumer equipment to access the network) and strict regulation, for instance standardization on one network protocol all suppliers **MUST** use (GSM, CDMA, TDMA) to enhance network ubiquity and reliability.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

Forcing these changes in this one band would have a dramatic effect on the cell network. It would be an excellent experiment on how standards might be brought to bear and how that may enhance the cell/wireless experience for the customer.

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

As a happy T-Mobile customer, I am not interested in switching service providers. As a happy Apple Macintosh customer, I am interested in using this new product. I am hoping I can do both!

These true open access standards should apply to the entire wireless market.

Sincerely,

Marty-Jean Bender

Dear Federal Communications Commission,

Guys , I'm prefacing this with a few observations of my own !!

My very own ancient Scots' family which dates back to King Aedan of Dalraida circa 550 AD settled in 1651 and I take MY Constitution , MY Bill of Rights and My Freedoms very seriously !! IN fact , I'm downright possessive and guard them zealously if not even jealously !!

Need I remind you that AT&T , the rotting carcass of Ma Bell , was one of the most vile and contemptible monopolists for almost an entire century !! She was truly even far worse then Mommie Dearest and may have driven Norman Bates to many of his excesses !!

There's something truly Unamericasn about Corporate Giants who are Monopolistic and have a virtual stranglehold on vast areas of American Commerce along with American Life !!

By teaming up with Apple , AT&T and a small coterie of Corporate Thieves have once again created The Evil Monster we all struggled and once upon a time succeeded in consigning to its' old mouldering Transylvannian Crypt !!!!!

The smell of De Comp was still hovering over their Ancient Vampiric Vault of Corruption when they were inextricably linked to Bushie Shite's Unamerican and Unconstitutional Warrantless Data Mining , Eaves Dropping , and Wire Tapping of ALL of the phone calls and e-mails of ALL Decent and Loyal , Honest and Hard Working American Citizens , and as I have alluded , to even those of us of very early Colonial and Patriot Stock !!!!!

They still will NOT come clean on their nefarious deeds to this very date !!

These are the very last monopolistic Thieves and Monsters who should be permitted such a stranglehold on All of America !!

Just as it is incumbent upon you to guarantee the Freedom of The Internet , it is essential that you take down Ma Bell once and for all and **FREE THE IPHONE For All Americans For All Time !!!!!**

A little healthy competition will bring down prices and speed up connectivity while diluting that miasmic molasses of a network to which AT&T are restricting their hapless victims , ooo...oooooppsss , that should have been "their hapless customers" !!

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to

shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

Sincerely,

Brian Napier
