FILED/ACCEPTED
AUG 22 2007
Federal Communications Commission
Office of the Secretary

Commissioner Deborah Taylor Tate

Dear Commissioner Tate,

The airwaves belong to the public, not corporations like Verizon and AT&T whose anti-competitive practices have resulted in the U.S. falling to 16th in the world in high-speed Internet rankings.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

Sincerely,
Kaveh Kamooneh

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

These true open access standards should apply to the entire wireless market.

Also it is imperative with this open consumer practice that our government provides the innovation competitive service providers could contribute through whole sale open access. Not just 40% band width that won't be viable for years, but 100% whole sale access for all to participate in a truly competitive environment.

One only needs to look to the problems of radio communication from our emergency systems including the 9/11 tragedy, to see what proprietary carriers do to block universal emergency communication to this day!!!

August 17, 2007

Jonathan S Adelstein
Commissioner, Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Dear Jonathan Adelstein:

This will close the internet gap significantly between rural and poor areas of the country, bringing knowledge to millions of children, inspiring them to things that they may never have known they could do. I, George Taylor of Fredericksburg, VA am one of many who believe not allowing this for the only quoted reason as being "not following standard procedures" is a disservice to the American people and suiting needs of big cable and phone.

Cable and phone charge high premiums for tiered levels of broadband speed and service and never deliver on there promised, advertised, and guaranteed speeds. This has so far gone unchecked with no real competition. This competition would make the internet better everywhere for everyone.

America's broadband Internet goals are going unmet and America's international position is rapidly falling. Many American families, schools and libraries cannot afford broadband and most of rural America cannot even get access to the broadband Internet.

Once online, many families are concerned about the growing threat to children of easily accessible indecent and pornographic material. And public safety organizations often can't work together due to incompatible data networks.

It doesn't have to be this way. I urge you to support the M2Z Networks (www.m2znetworks.com) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet. It will make us safer. We will become more competitive. It will create equal opportunity. It will improve our great country.

Please support M2Z today.

Sincerely,

George Taylor
