

how is USA and china the same

we all complained about google helping the chinese government lock the internet and track down the bad people who tried to bring the light to the masses.

we know this by having a free internet!!

we know that comcast has to be the largest monopoly for the internet, trying to tell us we have the fastest internet connection with what? 768mb download speed -that is until you start using it. if you use demorcy player, i-tunes, u-tube or anything to stream over your connection, your in violation of thier vaugy policy that they wount tell you about, but will gladly charge you more for more bandwidth.

remindes me of when i was a kid and the whole block was on a party line, you could make all the calls you wanted as long as nobody was on the line before you.

is this what i pay for - XXX bandwidth but when other party liners use theres we all drop to XX bandwidth?? does my bandwidth overlap with the customer before and after me - not what i thought we pay for.

i know about hitler, stalin, meo, tailgunner joe and the church of scientology because of the free internet, but if i have to pay for different levels of information access, it will be easier to rewrite history so that the square dance for lady liberty might not have ever happened in china!!!!???? or did it?

ps sorry for the spelling, i couldnt afford a higher ed
