Washington, DC 20554

Dear Robert McDowell:

America's broadband Internet goals are going unmet and America's international position is rapidly falling. Many American families, schools and libraries cannot afford broadband and most of rural America cannot even get access to the broadband Internet.

Once online, many families are concerned about the growing threat to children of easily accessible indecent and pornographic material. And public safety organizations often can't work together due to incompatible data networks.

It doesn't have to be this way. I urge you to support the M2Z Networks (www.m2znetworks.com) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet. It will make us safer. We will become more competitive. It will create equal opportunity. It will improve our great country.

Please support M2Z today.

Sincerely,

Berton Ridley

Once online, many families are concerned about the growing threat to children of easily accessible indecent and pornographic material. And public safety organizations often can't work together due to incompatible data networks.

It doesn't have to be this way. I urge you to support the M2Z Networks (www.m2znetworks.com) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet. It will make us safer. We will become more competitive. It will create equal opportunity. It will improve our great country.

Please support M2Z today.

Sincerely,

Michelle Dysch

Dear Robert McDowell:

America's broadband Internet goals are going unmet and America's international position is rapidly falling. Many American families, schools and libraries cannot afford broadband and most of rural America cannot even get access to the broadband Internet.

Once online, many families are concerned about the growing threat to children of easily accessible indecent and pornographic material. And public safety organizations often can't work together due to incompatible data networks.

It doesn't have to be this way. I urge you to support the M2Z Networks (www.m2znetworks.com) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet. Hello. I've decided to write this complaint after reading about so many AT&T customers from Puerto Rico and the USVI complaining that the iPhone is not available to be activated with local area codes numbers. Let me start by saying that AT&T is breaking the law because of Apples disinterest to follow laws. According to FCC Ordered Wireless to Wireless Local Number Portability law effective November 24, 2003 all carriers should; First, the FCC held that wireless customers who port their numbers should have the same flexibility to switch carriers that non-porting customers have currently, even if they have not settled their account with the old carrier. Thus, while wireless carriers may include and enforce credit requirements, early termination fees, and similar contractual provisions in their customer agreements, carriers may not refuse to port numbers upon receipt of a valid request from the customers new carrier. ; ; Second, the FCC held that wireless-to-wireless porting does not require the wireless carrier receiving the number to be directly interconnected with the wireless carrier that gives up the number or to have numbering resources in the rate center associated with the ported number. Although wireless carriers may voluntarily negotiate interconnection agreements with one another, such agreements are not required for wireless-to-wireless porting. In cases where wireless carriers cannot reach an agreement on the terms and conditions of porting, they must port numbers upon receipt of a valid request, with no conditions. ; ; Third, the FCC encouraged wireless carriers to complete simple ports within the industry- established porting interval of two and a half hours from the time the customer requests service from the new carrier. Although the Commission did not propose to adopt the industry standard as a mandatory rule, it found no evidence that the standard was technically infeasible, and stated that it would reexamine the issue if it received numerous consumer complaints about the length of the wireless porting process. ; 1) So lets say AT&T claims cannot activate area codes due that Apple; decided not to sell the iPhone in Puerto Rico and USVI thru their stores. ; Irrelevant As many of you have posted the iPhone can be obtained thru; several ways: (Ebay, family members in the states, people who travel; constantly, etc.) ; 2) The iPhone (equipment) works only in the AT&T network in the US (this; also includes PR and USVI). ; 3) AT&T as an FCC approved Wireless Provider for the US (again including PR; and USVI) needs to comply with the Portability of your number if you; request for it, with no conditions; So if you 1) own an iPhone (approved unit to be used in AT&Ts network), 2); have a number that you want to keep and request for it to be Ported to; AT&T from another carrier, it should be processed without any problem. ; Now AT&T claims: Apple is the one responsible for the activation of iPhone; units using iTunes but according to many of you, iTunes doesnt allow for; this process if you have an 787, 939 or 314 area code. By not complying; with the law AT&T is the one that would have to respond to the FCC is; complaints are sent by customers. ; The FCC regulates wireless carriers in the US (50 states, PR and USVI).
