Commissioner Jonathan Adelstein

Dear Commissioner Adelstein,

The airwaves belong to the public, not corporations like Verizon and AT&T whose anti-competitive practices have resulted in the U.S. falling to 16th in the world in high-speed Internet rankings.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

Sincerely,  
Kelly Morrison

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

Joshua Boateng

Dear Federal Communications Commission,

I want to be able to use whatever device I want on any network for which I pay for service. TV service works that way -- I don't have to buy a tv and then sign a long service agreement with a particular cable provider, and then lose my tv if I change providers. Why should it be that way with something as crucial to our social and work lives as a cell phone and mobile internet?

The U.S. is ahead of the rest of the world in many ways, but this is not one of them. I hope you will help to remedy the restrictions. I want an iPhone! But without AT&T.

Robert McDowell  
Commissioner, Federal Communications Commission  
445 12th Street, SW  
Washington, DC 20554

Dear Robert McDowell:

America's broadband Internet goals are going unmet and America's international position is rapidly falling. Many American families, schools and libraries cannot afford broadband and most of rural America cannot even get access to the broadband Internet.

Once online, many families are concerned about the growing threat to children of easily accessible indecent and pornographic material. And public safety organizations often can't work together due to incompatible data networks.

It doesn't have to be this way. I urge you to support the M2Z Networks ([www.m2znetworks.com](http://www.m2znetworks.com)) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet. It will make us safer. We will become more competitive. It will create equal opportunity. It will improve our great country.

Please support M2Z today.

Comment for Auction 73: The 700 mhz frequency is perfect to provide rural broadband service to under-served or unserved areas throughout rural America. Every year the Rural Utility Services division of the Department of Agriculture hands out 100's of millions of dollars for companies to provide high speed wireless Internet to rural America. Why couldn't the FCC and Dept of Agriculture get together. And when you award the money for the company to provide the service, you also assign them the 700 space that they need to make sure that they are successful and that the RUS Loan Grant stands a better than average chance of being paid back. The fastest way to get American's on the Internet is NOT to sell the 700 frequency to the big Telco's and let them sit on it and eliminate competition. Put this in the hands of small to medium business and RUS recipients all over America and watch economic growth return to rural America. The FCC should make the 700 mhz frequency available to anyone that wants to register for it and limit its use specifically to Internet service. Ronald E Ham Nahunta, Georgia 31553

Robert McDowell  
Commissioner, Federal Communications Commission  
445 12th Street, SW  
Washington, DC 20554

Dear Robert McDowell:

America's broadband Internet goals are going unmet and America's international position is rapidly falling. Many American families, schools and libraries cannot afford broadband and most of rural America cannot even get access to the broadband Internet.

Once online, many families are concerned about the growing threat to children of easily accessible indecent and pornographic material. And public safety organizations often can't work together due to incompatible data networks.

It doesn't have to be this way. I urge you to support the M2Z Networks ([www.m2znetworks.com](http://www.m2znetworks.com)) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet. It will make us safer. We will become more competitive. It will create equal opportunity. It will improve our great country.

Please support M2Z today.

Sincerely,

Robin Fozo
