Deborah Taylor Tate  
Commissioner, Federal Communications Commission  
445 12th Street, SW  
Washington, DC 20554

Dear Deborah Taylor Tate:

America's broadband Internet goals are going unmet and America's international position is rapidly falling. Many American families, schools and libraries cannot afford broadband and most of rural America cannot even get access to the broadband Internet.

Once online, many families are concerned about the growing threat to children of easily accessible indecent and pornographic material. And public safety organizations often can't work together due to incompatible data networks.

It doesn't have to be this way. I urge you to support the M2Z Networks ([www.m2znetworks.com](http://www.m2znetworks.com)) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet. It will make us safer. We will become more competitive. It will create equal opportunity. It will improve our great country.

Please support M2Z today.

Sincerely,

Benji Berlow

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use our public spectrum to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use our public spectrum to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

Bruce elsensohn

Jonathan S Adelstein  
Commissioner, Federal Communications Commission  
445 12th Street, SW  
Washington, DC 20554

Dear Jonathan Adelstein:

This is one of the best ideas that I have ever heard. As a recruiter, I encounter many people who find it challenging to get limited access to the internet. As a result, their ability to be competitive in the workplace is severely impacted. Searching job opportunities, sending resumes, checking commuting distances and getting directions are just a few examples of how they are missing out on opportunities to improve their situations. It will also help our nation to become more knowledgeable regarding global, national, state and local events in everything from politics to product recalls. For a while, people in many areas of the US have complained about the "dumbing down" of America. This would be an excellent opportunity to positively address that issue.

Current providers broadband providers do not have much to worry about since many people choose to get premium services for a wide range of products. Let us be honest, many people enjoy adult content and gaming, and they will be open to paying a monthly fee to continue having access to those services. Even people who do not regularly use those service may prefer an internet experience that does not include advertising. Current providers will not be crippled by M2Z offering free broadband.

Even if current providers managed to lose 5-10% of their consumer base, they would become a moderately profitable industry as opposed to a highly profitable one. Additionally, I am certain that their advisors are already planning on how to get subsidies if they can prove their businesses have been negatively impacted.

-----  
I urge you to support the M2Z Networks ([www.m2znetworks.com](http://www.m2znetworks.com)) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet. It will make us safer. We will become more competitive. It will create equal opportunity. It will improve our great country.

Please support M2Z today.

Sincerely,

Solon Frazilus

Washington, DC 20554

Dear Deborah Taylor Tate:

America's broadband Internet goals are going unmet and America's international position is rapidly falling. Many American families, schools and libraries cannot afford broadband and most of rural America cannot even get access to the broadband Internet.

Once online, many families are concerned about the growing threat to children of easily accessible indecent and pornographic material. And public safety organizations often can't work together due to incompatible data networks.

It doesn't have to be this way. I urge you to support the M2Z Networks ([www.m2znetworks.com](http://www.m2znetworks.com)) plan to put America back on the right track by providing 95% of America with access to a free, fast, and family-friendly wireless broadband Internet.
