Dear Federal Communications Commission,

Comcast's blatant and deceptive blocking of peer-to-peer communications is exactly the problem millions of Americans have warned would occur without Net Neutrality protections.

The FCC must take immediate action to put an abrupt end to this harmful practice and prevent other Internet service providers from following Comcast's example and discriminating against the free flow of online information.

The Internet is a vital engine for economic growth, civic participation and free speech. We simply can't allow corporate gatekeepers to smother these democratic communications by discriminating against new technologies, secretly interfering with Internet traffic and stifling innovation.

Sincerely,

Larry Giannou

Dear Federal Communications Commission,

I agree that Comcast can block/slow down peer-to-peer traffic if they want to. BUT the FCC should require internet providers to disclose if they are doing that. Otherwise, it's not "unlimited" or 6MBPS speed like they advertised! Once the FCC rule that allows apartments to pick their own cable provider passes, I would like to be able to shop around and find out who ISNT slowing P2P traffic and give them my money.

Thanks for your time.

The FCC must take immediate action to put an abrupt end to this harmful practice and prevent other Internet service providers from following Comcast's example and discriminating against the free flow of online information.

The Internet is a vital engine for economic growth, civic participation and free speech. We simply can't allow corporate gatekeepers to smother these democratic communications by discriminating against new technologies, secretly interfering with Internet traffic and stifling innovation.

Dear Federal Communications Commission,

Comcast's blatant and deceptive blocking of peer-to-peer communications is exactly the problem millions of Americans have warned would occur without Net Neutrality protections.

The FCC must take immediate action to put an abrupt end to this harmful practice and prevent other Internet service providers from following Comcast's example and discriminating against the free flow of online information.

The Internet is a vital engine for economic growth, civic participation and free speech. We simply can't allow corporate gatekeepers to smother these democratic communications by discriminating against new technologies, secretly interfering with Internet traffic and stifling innovation.

Sincerely,

David Worenklein

Dear Mr. Martin, et al:

I recently read two articles that I found very disturbing.

- 1) The desire by the FCC to open up media ownership rules even further.
- 2) Comcast using data discrimination methods to block some forms of Internet Traffic.

Firstly, the issue of media ownership is one which I find to be of paramount importance to the future of the USA. It is very important that you reverse the trend of loosening rules and instead tighten rules to limit a conglomeration of media outlets!

Secondly, the fact that Comcast is using data discrimination is an issue which I expect the FCC to tackle immediately. The issue is that Comcast could start employing this method, and other ISP could follow and the net result would be censorship. It is important this is stopped immediately.

In this day and age, we have seen our government do things which we would not have dreamed of only decades ago: torture, wiretapping, eavesdropping, intercepting mail, etc.

All I ask is that you please embody the true values of the America in your actions and votes!

Thank You!!

Re: Request for FCC Review of Comcast actions involving BitTorrent

Dear Mr. Chairman:

During your tenure as FCC chairman, you have supported the free market over government regulation as the best way to preserve free expression and speech while also bringing new benefits to Internet users.

The Hands Off the Internet coalition has supported this view, as we believe it is consistent with America's traditional "light regulatory touch" Internet policies that have enjoyed strong bipartisan support for more than a decade.

As you know, the cornerstones of today's open Internet are the four principles embedded in the FCC's August 2005 net neutrality policy statement:

1. Consumers are entitled to access the lawful Internet content of their choice;
2. Consumers are entitled to run applications and services of their choice, subject to the needs of law enforcement;
3. Consumers are entitled to connect their choice of legal devices that do not harm the network; and
4. Consumers are entitled to competition among network providers, application and service providers, and content providers.

These principles are the necessary safety net to protect consumers and the openness and freedom of the Internet.

**Comcast's actions toward BitTorrent: Initial reports and subsequent confusion demand FCC investigation**

Comcast stands accused of violating the FCC's four principles. The company has responded by offering the rationale for the actions it took. Now the ball is in your court.

The FCC must determine if any of its four principles have in fact been violated. If not, and the process has been fair and open, then so be it. If after reviewing the facts, the FCC determines that the company has been in violation, then the FCC must determine the remedy.

With both outcomes, the process works and the integrity of the four principles are intact.

**The FCC is on firm ground to investigate this possible violation of the open Internet**

From a legal standpoint, Mr. Chairman, we believe the FCC has clear authority to enforce its four principles. Title 1 of the Communications Act of 1934 specifically grants the FCC the power to:

“regulat[e] interstate and foreign commerce in communication by wire and radio [and to] perform any and all acts, make such rules and regulations, and issue such orders” to fulfill this mission.

In 2005, in the *Brand X* case, the U.S. Supreme Court upheld the FCC's authority, writing that provisions in the Communications Act:

“give the Commission the authority to promulgate binding legal rules.... [Also,] the Commission has jurisdiction to impose additional regulatory obligations [on Internet Service Providers under its authority] ... to regulate interstate and foreign communications....”

Finally, as you testified to the Senate Commerce Committee on September 12, 2006 when asked if the FCC had authority to stop an Internet provider from blocking or degrading access:

“The Commission does have authority under Title 1 of the Communications Act, and indeed last summer the Supreme Court... stated that the Commission has ancillary authority to adopt additional rules over the infrastructure providers of broadband access.... So I think we do have that authority.”

We believe you do, too. Mr. Chairman, we were on record during the 109<sup>th</sup> Congress in support of codifying these principles into federal law. Though the legislation was held up

and did not pass into law, we remain committed to these Four Principles and we urge you to move expeditiously to resolve any possible violations and uphold their integrity.

Sincerely,

Mike McCurry  
Co-Chair

Christopher Wolf  
Co-Chair
