

RM-11306 & RM-11392

I oppose RM-11392 as proposed by N5RFX

I support RM-11306 as proposed by ARRL

"The only thing constant is change." Very well said, but usually change is opposed. Change takes us out of our comfort zone. However, the Amateur Radio Service, like every other communications service, must change to stay current or even lead the way with technology. The inherent problem within Amateur Radio is our affinity for hanging on to the old technologies as well.

As our regulative agency, you at the FCC are often caught in the middle of these debates. It's an unfortunate part of the job but most of us are very appreciative of your efforts. However, in an attempt to minimize repetitive changes, the 'regulation by bandwidth' approach method, as proposed by the ARRL in RM-11306, appears to be the most sensible avenue today. By implementing this, the Amateur Radio Service can progress into new technologies without frequent requests for rule changes.

Radio spectrum is finite and valuable. By implementing 'regulation by bandwidth', the Amateur Radio Service can continue to repay mankind through innovation, advancing the radio art and serving our communities with back-up communications during a crisis.

With regards and appreciation,

Clifford H. Segar
