

I am sad to hear that you are considering limiting or prohibiting HF digital communications. I belong to MARS and ARES and use HF digital in both service organizations using MT-63 and PACTOR III. It would be a great disservice to lose these message formats for emergency communications. I also participate in a yearly medical mission to Honduras with International Health Service where we use PACTOR III to communicate between the medical teams working in outlying areas where there is no other means of communications to send X-rays and other critical information.

Please consider my opinion against limiting HF digital communications.
