

This PRM would eliminate the HF subbands and restrict the Data Bandwidth to 1.5KHz that is needed for our Digital traffic. This would immediately kill Pactor 3, our EmComm mainstay for sending/receiving digital traffic for the Emergency Communications we provide.

If I remember correctly we as amateur radio operators are encouraged to participate with emergency communications when possible to aid others. This would be a big detriment in delivering those communications in a time of need.

Thank you for your time.
