

Localism is a key part of our WNRP-AM in Gulf Breeze, FL. We are live & local M-F 5A-6P.

However, due to poor ground conductivity of Florida's sandy soil, we cannot cover the entire market. Allowing AM stations to use FM translators would be a great help to solving our technical limitations.

Translator use should be limited to carrying local stations.

There are many religious non-comm's that have used out-of-market translators to extend their signals hundreds of miles. Translator frequencies should be reserved for local FM as well as AM stations to extend coverage ONLY within the local market area.

Thank you.
