

Murfreesboro has grown quite a bit since I first came here in the early 1960s. The local AM radio station covered our city well back then. Now the city limits have broadened and there seems to be more buzzing and hums from power lines. Even the sensors that change traffic signals make so much noise on the AM band that I have to turn to FM. Like in many communities, our local AM station is the only source for local emergency bulletins, hearing the local football and basketball teams, learning who died as well as getting details on news items that impact Murfreesboro. Allowing AM stations to fill-in with clear signals on small FM transmitters would be a blessing to the public. The FCC's idea is a great one!
