

Comcast and BitTorrent WC Docket number 07-52

Blocking traffic is censorship, and should be avoided unless a site is proven to contain illegal items.

Blocking all bittorrent or other items, just because they are used illegally by some, is a bad practice. There are plenty of legit uses for it.

Slowing connection speeds based on what is being viewed/downloaded should be restricted as well. Just like cutting ones connection because they download too much.

I hope the FCC wins the ruling here.

Some legitimate use of BitTorrent would be a quick look at the Linux/BSD communities, which use it extensively, even for OS updates/patches.

Bandwidth is paid for upon entering an agreement with ISP's. Bandwidth should not be lessened, cut, or blocked due to the file types or censorship of the ISP's discretion without proof of illegal activity
