Hi Robert

FILED/ACCEPTED

FEB - 5 2008

Federal Communications Commission
Office of the Secretary

From What I am understanding, M2Z (which is backed by Google, MySpace, Amazon, Netscape, and TiVO) has asked the FCC to be given a portion of the spectrum (700mhz) so that they may make broadband internet available to 95% of all Americans for free, just like over-the-air TV and radio are. M2Z would then pay 5% of its gross revenue to the US treasury. How much of Verizon, Sprint, and AT&T's money goes back to the US treasury??

Are you telling other commissioners to flatly deny M2Z's application on the grounds that it asks the FCC to circumvent the usual process of auctioning off frequency spectrum?
Is the FCC bankrolled by powerful telcom giants such as Verizon, Sprint, and AT&T, who fear they would be forced out of business?? Trust me Robert, they'll eventually find other ways of ripping off the American public.

You see Robert this is the problem when powerful unelected officials are beholden to special interests. It's bad enough that senators and congressmen are bought and sold like street whores. But they come up for re-election eventually and have to account for their actions. FCC commissioners do not. They are free to take bribes, kickbacks, and all sorts of payoffs and never have to face the public.

I guarantee you Robert that if M2Z's proposal were ever voted on by the American public, it would be approved overwhelmingly.

I live in the rural where high speed internet is not an option. It's like living in the dark ages. I have to drive my kids 20 miles to the nearest city library just so my children can use the internet. The phone lines are in such bad shape out here that dial-up is out of the question so what are millions of rural people suppose to do??

Do the right thing.

Thx John J.

It is unfair to keep profits only to one company because of a signed agreement. This only continues the degradation of freedom in the world. Everyday, the people are less and less free to do as they please. One can't even watch the television without getting at least 15 minutes of commercial brainwashing.

Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use our public spectrum to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

Brian Lynch
