

Comcast's blatant and deceptive blocking of peer-to-peer communications is exactly the problem millions of Americans have warned would occur without Net Neutrality protections.

The FCC must take serious and immediate action to put an abrupt end to this harmful practice and prevent other Internet service providers from following Comcast's example of discriminating against the free flow of online information.

The Internet is a vital engine for economic growth, civic participation and free speech. We simply can't allow corporate gatekeepers to smother these democratic communications by discriminating against new technologies, secretly interfering with Internet traffic and stifling innovation.

It is also common knowledge that while Comcast offers 'unlimited' usage, there are hidden limits that once attained, will lower your speed, allowing them to provide less than you pay for, per their advertising.

Not all heavy downloaders use peer-to-peer communications, many of us are just downloading things we pay for... this is very unfair.

In my case I am a simmer (a The Sims 2 player), and we have lots of custom content for the game that we pay for and *must* download, there is no other way to get it - once I reach my hidden Comcast limit, my internet goes down to dial-up speed or lower... while I'm paying for 6Mbps, unlimited.

Why is this allowed?
