

Comcast's argument is completely invalid. They are selling bandwidth they don't have to customers, then blaming them. Their job is to deliver the packets and nothing more. If a few high bandwidth users are slowing down others, then they should buy more bandwidth, or sell to less customers. None of this selling what you don't have.

Their blatant and deceptive blocking of peer-to-peer communications is exactly the problem millions of Americans have warned would occur without Net Neutrality protections.

The FCC must take serious and immediate action to put an abrupt end to this harmful practice and prevent other Internet service providers from following Comcast's example of discriminating against the free flow of online information.

The Internet is a vital engine for economic growth, civic participation and free speech. We simply can't allow corporate gatekeepers to smother these democratic communications by discriminating against new technologies, secretly interfering with Internet traffic and stifling innovation.
