

Please take the initiative and immediately APPROVE the merger between these two satellite radio companies. What is presently occurring from anti-merger groups is simply making me, the consumer, sick. I want more choice, better programming, choice of programming and for terrestrial radio to improve on its out-dated product and business model. It is time to quit stalling, APPROVE THE MERGER, and let the market and consumers dictate the future of satellite radio - NOT the NAB. Maybe then terrestrial radio will see the competition is in the programming, not who is lobbying in Washington.

Much like Blu-Ray and HD-DVD, these two companies are beating themselves up. I didn't see the government step in and save HD-DVD and now the market and consumers can help advance that high-def medium with a concentrated effort on one platform.

What is happening at the DOJ is sickening and sad - please take the first step and voice an approval for the consumers and this advancement in technology, before its too late.

Thank you.
