

To Whom It May Concern,

The Comcast Corporation is discriminating against an entire class of applications by their actions in blocking or impeding peer-to-peer communications. It appears that Comcast is using profiling tactics without regard to the content of such communications. What is next? Will Comcast block or impede any communications that don't use a particular application or protocol? If this sounds unlikely, then why would Comcast attempt to keep the public from attending hearings by packing the room with their shells?

It is obvious that without Net Neutrality protections, such corporations will be able to do what they want, much as the large trusts did in the USA during the late 19th century. The original mandate of the FCC emphasized the protection of the consumer. Is this no longer the case? I ask the FCC and the Consumer & Governmental Affairs Bureau to take steps to protect the consumer, and to promote the free flow of information in our society, by mandating that Comcast cease its overt discriminatory actions against peer-to-peer communications.

Thank you,  
Jim
