Washington, DC 20554

Dear Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use our public spectrum to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

Mr. bennet BLANCHARD  
30110 Bran Rd  
Lacombe, LA 70445-3040

As a consumer interested in protecting competition, innovation, and legitimate use of cable TV content, I urge you to refuse requests for waivers of 47 CFR 76.1204(a)(1) by NCTA, Charter, Verizon, and all other cable providers. The FCC's integration ban, which in effect requires cable companies to integrate CableCARDS into their own set-top boxes, remains good policy today.

Now ten years after the Telecommunications Act of 1996, cable companies have dragged their feet long enough on competitive alternatives to proprietary set-top boxes, thus hampering innovation and harming consumers. The integration ban will also help market

competition prevent further restrictions on cable subscribers' ability to make legitimate use of recorded content.

By adopting content protection limits (encoding rules) in docket no. 97-80, the Commission recognized the importance of allowing consumers to make certain uses of TV content, regardless of a particular cable provider's or copyright holder's wishes. With competition spurred on

by the integration ban, consumers would have the freedom to choose the least restrictive cable-compatible device available. The CableCARD standard already prescribes restrictions that harm consumers by limiting non-infringing uses, and such restrictions will get even worse if cable providers' set-top boxes are unchecked by competition. Please refuse requests for waivers of 47 CFR 76.1204(a)(1).

Sincerely,

Miss Laura Bailey  
822S.E.1st.St.  
Washington, IN 47501

Please issue a public statement in support of new competition and "open networks" on our public airwaves. Our airwaves need to be protected from corporations like AT&T, Verizon, and Comcast that would stifle the national wireless market.

Sincerely, Jan Hoffman

Dear Communications Commission,

The iPhone may have set the stage for the future of mobile Internet--but misguided corporate and State policies allow companies like AT&T to shackle great gadgets to their closed networks in what amounts to "tied-house" agreements detrimental to public and consumer interest and benefit.

To free wireless Internet, the FCC and Congress must use our public spectrum to create an open network that gives consumers:

- 1) The freedom to use whatever device we want on any network;
- 2) The freedom to choose among many providers in a competitive wholesale marketplace; and
- 3) The freedom to access any content or services we want through our devices without Let or Hinderance.

These true open access standards should apply to the entire wireless market, along with studies to determine how such policies will actually translate into lower prices and greater consumer benefits.

Sincerely,

Mr. Larry Ellis Reed
