

A two-week study of 10 random PSAP's (out of 69) reflected 1682 911 calls from non-initialized phones; only 44 of these calls were 911 emergencies. In addition, a rural county law enforcement agency arrested two brothers who made 700 calls to 911 from a non-initialized phone. The arrest occurred concurrently with NASNA's presentation of this issue to the FCC.
