IP Voice Connect

Get an enhancement to existing systems, a scalable service that evolves with your business or a complete cutting-edge turnkey solution.

Sprint IP Voice Connect offers intra-office, inter-office, local and long distance services, as well as hosted voice features by routing voice traffic over the Sprint Dedicated IP or Global MPLS network. Rather than using a traditional circuit-based telephone connection, incoming and outgoing calls travel over the SprintLink IP network.

A wide area network (WAN) connects various corporate locations and allows unlimited "on-net" calling at a flat monthly price. This price also includes mobility features for Sprint PCS phones, a single voice mail box for office and mobile calls and abbreviated dialing from the Sprint PCS handset to business extensions.

Features:

- Unprecedented national coverage
- Network-hosted VoIP solution
- Replicates several traditional PBX features in addition to offering numerous enhanced applications
- Wireless integration for PCS handsets

Benefits:

- Reduces Telecom Expenses
- Leverages Current Resources
- Lessens Platform Migration Risks
- Minimizes New Technology Expenses
- Reduces Platform Migration Risks
- Standardizes Worker Communications
- Offers Flexibility of Services

Internet Access

Get connected with the 100% fiber-optic SprintLink Internet backbone.

You'll enjoy the fastest download speeds, maximum reliability and always-on service with 24x7 Sprint monitoring and support, plus these benefits:

- Convenient, efficient worldwide access from more than 100 countries
- High-speed connections up to 2.5 Gbps/10 Gbps
- Exceptional service level agreements
- Online performance reporting
- Flat-rate and scalable pricing options
- On-site customer training, local field engineering and sales office support

This unique approach ensures your data gets to its destination, via multiple paths to adjacent network nodes, and allows excellent fault-tolerant network redundancy.

Dedicated Internet Access from Sprint is not only scaled to grow with your business, as you expand into emerging markets, but provides continuous 24-hour network monitoring and support, robust trouble reporting and problem-solving capabilities, and comprehensive management of network and customer hardware.

SprintLink Packet Private Line

A flexible point-to-point solution that ensures security, reliability, performance and global availability.

Delivered over Sprint's multi-service, global IP network, SprintLink Packet Private Line™ (PPL) is an innovative carrier service that blends the simplicity, performance, and security of traditional private lines with the flexibility and tenacity of a global Tier 1 IP backbone.

SprintLink PPL delivers:

- Support of local Ethernet access
- Unprecedented bandwidth flexibility
- Built-in redundancy
- Seamless migration to IP
- Optimum security

This service is provisioned completely over Sprint-owned backbone facilities, ensuring unbeatable performance and unassailable privacy. Using Layer 2 Tunneling Protocol, Version 3 (L2TPv3) technology, SprintLink PPL locks data between sending and receiving ports.

Sprint provides wholesale services for:

- ISPs
- Cable
- RBOCs
- CLECs
- Wireless Carriers
- Resellers
- Enhanced Service Providers

Our mission-critical network infrastructure enables you to provide a wide range of services to your customers.

Let's take a closer look at what Sprint Wholesale can provide your company:

MPLS

-This comprehensive enterprise solution lets your company consolidate all applications, end users and support structures onto a single global network

-High-redundancy, congestion-free backbone over native IP network

-Backbone-failure recovery systems and flexible, local access options that provide last-mile connectivity

-Extensive proactive monitoring, 24/7 trouble resolution and extensive customer support tools

WIRELESS BACKUP

-Sprint PCS Data Link converges your company's wireline and wireless networks via a secure, managed, wireless, local access option

-A secure, private, wireless connection to the enterprise WAN

-Download speeds from 600Kbps to 1.4Mbps and upload speeds from 350Kbps to 500Kbps

-Protection from a potential, dedicated wireline failure

GLOBAL SPRINTLINK IP SERVICES

- Sprint IP network implementation directly over fiber

- Services designed for performance with engineering that ensures *network links don't exceed 50% utilization*

- Shared tenant facilities with outstanding infrastructure and low cost IP interconnections

- Multicasting for enhanced bandwidth management allowing for more efficient utilization

In addition, our excellent service level agreements cover everything from network availability to latency-sensitive applications like voice and video. Our SLAs represent the vested interest we have in getting and keeping your business up and running.

Our tenured account teams have an average of over 10 years' experience in carrier markets, which provides you with a single, sophisticated and committed point of contact. According to the 2006 ATLANTIC-ACM Carrier Report, Sprint customers were more satisfied with the quality of the Sprint network than any other customers on any other network.

Whether your market is one town, one country or one world, Sprint Wholesale delivers the broadest range of wireline and wireless solutions in the business.

Sprint Voice Services

Backed by industry-leading service and support, Sprint voice products have the features your customers demand. Our voice portfolio includes: [Customized Network Routing](#), [Outbound Voice Services](#), and [Toll-free Services](#).

Customized Network Routing

Sprint Wholesale Customized Network RoutingSM (CNR) enables you to use Sprint access and network services to originate and route customer calls. For details, [click here](#).

- Expand your domestic network without deploying your own facilities
- Route customer traffic that originates in the United States to your international gateway switch
- All digital, fiber-optic Sprint network ensures high quality
- Back-office support from Sprint

Outbound Voice Services

A choice of dedicated or switched services and enhanced routing capabilities support the different needs of both facilities-based and switchless operations. For details, [click here](#).

- Increase revenues with outstanding network quality
- Expand market presence without investing in your own facilities
- Offer customers a choice of outbound services with options for flexible cost accounting and billing

Toll-free Services

Enhanced routing capabilities that improve communications efficiency, reliability, security, and cost control. For example, you can use toll-free service internally and route calls to a central switch to deliver enhanced services to your customers. Real-time Automatic Number Identification (ANI) and Dialed Number Identification Service (DNIS) provide better information on the type of user for more efficient routing through your switch. For details, [click here](#).

- Available via dedicated, switched, or extension products in the U. S.
- Help customers take their businesses global with international toll-free services
- Reduce costs and support requirements by terminating multiple toll-free numbers on a single trunk group
- Prevent lost income and fraud through real-time monitoring of toll-free utilization

Search Wholesale

The data services that deliver customers to your door

Expand your services and reach new customers with Sprint Wholesale Data services, including CPE, Dedicated Internet Service, MPLS VPN, and SprintLinkSM Frame Relay.

CPE

Sprint Wholesale is your single source for data services, and the customer premise equipment (CPE) that facilitates those services.

- Routers, channel service units/data service units (CSU/DSUs), and multiplexers
- Certified by Sprint for use with Sprint Wholesale data services

Dedicated Internet Service

Sprint Wholesale Dedicated Internet ServiceSM helps you profitably market Internet protocol applications over fast, simple, and secure dedicated lines. For details, [click here](#).

- Exceptional network quality and reliability
- Access options from T1 to OC48 and Ethernet up to 10GB (available speeds vary by location)
- Turnkey services reduce your networking hardware and software investment

SprintLinkSM Frame Relay

SprintLinkSM Frame Relay is a global frame relay service, connecting customers in more than 100 countries. Based on Layer 2 Tunneling Protocol, Version 3 (L2TPv3), SprintLink Frame Relay helps maximize connectivity with improved performance, survivability, and flexibility. SprintLink Frame Relay gives you and your customers:

- The ability to interconnect local area networks and connect to the Internet
- A broad selection of bandwidth options, up to 622 Mbps (OC12)
- For details, [click here](#)

Sprint MPLS VPNSM

Sprint MPLS (Multiprotocol Label Switching) VPNSM is the comprehensive solution for enterprise and carriers to support an ever-growing list of requirements, including:

- Connecting branch locations to improve the internal flow of information
- Supporting a mobile sales force
- Providing connectivity to key partners for resource sharing
- Enabling real-time bandwidth-demanding applications like voice and video

Sprint MPLS VPN allows you to consolidate all of your applications, end-users, and support infrastructure onto a single global network. For details, [click here](#).

Wireless WAN

Get the reliability, security and support your business locations require in a Wide Area Network (WAN) solution

- Leverages a Sprint-certified mobile broadband router or modem to provide primary connectivity for fixed and transportable devices, or to serve as a wireline back-up.
- Reduces access and port costs up to 50 percent by replacing traditional dedicated circuits.
- Combined with Sprint's Managed Network Services and customer premise equipment (CPE) support, provides the expected reliability of a traditional WAN solution.
- For details, [click here](#)

Sprint Nextel 'Powers Up' Virginia Coverage, Capacity to Its Wireless Networks with a More Than \$105 Million Investment

Significant Network Enhancements Made Throughout Virginia as Part

of a \$7 Billion Wireless and Wireline Investment Nationwide

RICHMOND, Va.--(BUSINESS WIRE)--Nov. 21, 2006--Sprint Nextel (NYSE:S) today announced enhancements to both the Sprint PCS Nationwide Network and the Nextel National Network(SM) in Virginia with an investment of more than \$105 million through the third quarter of 2006 with more to come before yearend. These extensive upgrades are the result of additional wireless cell sites and equipment being added to the networks, delivering additional coverage and network capacity to serve customers.

"The Sprint network team is constantly looking for ways to improve the customer experience in Virginia and throughout the country," said Brian McIntee, area vice president for the Mid-Atlantic area, Sprint. "We strive to make our wireless service the best where our customers live, work and travel."

The following is a detailed list of the areas improved by these enhancements to the Sprint PCS Network:

-- Aldie	-- Lake Anna
-- Chesapeake	-- Manassas
-- City of Washington, Rappahannock	-- Newport News
-- Culpepper	-- Norfolk
-- Dale City	-- Petersburg
-- Fairfax	-- Portsmouth
-- Farmville	-- Richmond
-- Fredericksburg	-- Suffolk
-- Ft. Belvoir	-- Vienna
-- Reston	-- Virginia Beach

The following is a detailed list of the areas improved by these enhancements to the Nextel Network:

-- Alexandria	-- Lorton
-- Boyce	-- Manassas
-- Catalpa	-- Markham
-- Commonwealth Center/Brandermill	-- Norfolk
-- Craddock	-- Port Royal
-- Culpepper	-- Reston
-- Elizabeth City	-- Richmond
-- Fairfax	-- White Oak
-- Fredericksburg	-- Williamsburg

"Sprint is committed to delivering the highest quality network coverage, and this is just one example of our never ending efforts to optimize our network performance to provide the best service," McIntee said. "Customers in Virginia can expect to see expanded network quality as we continue our efforts to enhance and improve their wireless experience with Sprint."

Sprint plans to invest \$7 billion in its wireless and wireline networks nationwide in 2006.

Nextel National Network

The Nextel National Network, one of the largest all-digital wireless networks in the United States, is based on the integrated digital enhanced network (iDEN) always-on technology, which provides the world's fastest and most efficient walkie-talkie service. More people use the Nextel National Network for walkie-talkie calls than any other such service in the world. In 2005, the Nextel Network carried more than 100 billion direct connect calls.

Sprint Expands the Sprint Power Vision Network

Sprint offers the most wireless broadband coverage of any carrier through its Power Vision(SM) Network (EV-DO), which reaches more than 174 million people nationwide as of Nov. 17, covering over 219 communities with at least a 100,000 population as well as 673 airports. The Power Vision network allows users to access audio, video and data applications with handheld and connection card devices.

Sprint is the only carrier to begin rolling out an EV-DO Revision A network and expects to cover 21 markets where more than 40 million people live and work by the end of 2006 and upgrade its entire Power Vision Network to the faster EV-DO Revision A technology by Q3 2007. The faster data rates provided by EV-DO Revision A can enable richer applications and services, such as high-speed video telephony, music on demand, video messaging, large file uploads and high performance push-to-talk capability.

Power Network Coverage Tool Provides Unique View

In October, Sprint launched its Power Network Coverage Tool to help customers view detailed coverage maps down to the street address level. By entering an address or zip code, customers can see the availability of wireless coverage and the network signal strength on the Nextel National Network, Nationwide Sprint PCS Network(SM) or Sprint Power Vision Network. Customers can also view the location of recently added cell sites in many areas. The tool, available at www.sprint.com/coverage and at self-service touch-screen kiosks at hundreds of Sprint Nextel retail stores, is simple to use and helps set network coverage expectations for customers before signing up for wireless service.

About Sprint Nextel

Sprint Nextel offers a comprehensive range of wireless and wireline communications services bringing the freedom of mobility to consumers, businesses and government users. Sprint Nextel is widely recognized for developing, engineering and deploying innovative technologies, including two robust wireless networks serving more than 51 million customers at the end of third quarter 2006; industry-leading mobile data services; instant national and international walkie-talkie capabilities; and an award-winning and global Tier 1 Internet backbone. Sprint Launches Faster Mobile Broadband Network Throughout Southeastern Virginia

Users of the Nation's Largest Mobile Broadband Network Now Have

the Power of Significantly Faster Upload Speeds and a Mobile DSL-Like

Experience

NORFOLK, Va.--(BUSINESS WIRE)--March 13, 2007--Beginning today, Sprint (NYSE:S) customers throughout the Tidewater area can join the more than nearly 110 million people in more than 4500 communities who can enjoy access to the upgraded Sprint Mobile Broadband Network, which provides users faster data speeds and the ability to ultimately use richer applications and services such as high-speed video telephony, music-on-demand, video messaging and large file uploads.

The industry's largest mobile broadband network allows customers in the Norfolk market to experience significantly faster average upload speeds of 350-500 Kbps (compared with 50-70 Kbps on current EV-DO networks) and average download speeds of 600 Kbps-1.4 Mbps (from 400-700 Kbps). Sprint's upgraded mobile broadband network was awarded the coveted PC Magazine Editors' Choice Award selected by a panel of PC Magazine editors, and leading industry experts.

"Sprint customers in and around Norfolk can now take advantage of the fastest available mobile broadband network to send and receive information at DSL-like speeds," said Brian McIntee, Sprint area vice president for the Mid-Atlantic. "This leading technology gives our customers the powerful combination of mobility and speed to send and receive information so they can manage their business and personal lives while on the go."

Upgraded EV-DO Revision A coverage will be available throughout most of the Tidewater area including:

- Downtown Norfolk and Norfolk International Airport
- In and around Hampton and Newport News
- Virginia Beach
- Chesapeake
- Suffolk
- Most of the Virginia Peninsula to Atlantic
- Along most of the Interstate 64 corridor to Williamsburg

Currently, Sprint provides mobile broadband services throughout Virginia including in and around Northern Virginia and the Washington, DC suburbs, Fredericksburg, Richmond, Petersburg and many areas in between.

The upgrade to the faster technology is part of Sprint's ongoing investment in its wireless and wireline networks nationwide. Last year, Sprint spent more than \$17 million in Norfolk and \$7 billion nationally to improve its networks.

The Sprint Mobile Broadband Network is the nation's largest mobile broadband network, reach more than 209 million people nationwide in more than 10,600 communities as well as 1010 airports. Sprint will continue to upgrade its mobile broadband network to the faster EV-DO Revision A technology for the rest of 2007 which will further drive Sprint's wireless data leadership as customers will be able to use the upgraded network to utilize applications such as all IP video telephony, high-performance push-to-talk (walkie-talkie service), multi-user video conferencing, real-time gaming and video streaming as they become available.

Device Portfolio And GPS Leadership

Sprint also has the industry leading portfolio of Revision A-capable devices including the Merlin EX720 by Novatel Wireless (Nasdaq:NVTL), Sprint's first EV-DO Revision A-capable ExpressCard, the Novatel Wireless U720 USB device and three PCMCIA Type II Mobile Broadband cards. Other devices embedded with Sprint's EV-DO Revision A technology include laptops like Sony's VAIO VGN-TXN10 Series and rugged, stand-alone connectivity devices like Airlink's PinPoint X and Raven X. All of the Sprint EV-DO Revision A-capable devices will also work on the mobile broadband network in areas where the EV-DO Revision A upgrade is not yet available.

Sprint customers with the Novatel Wireless U720 and Novatel EX720 now have the power to use the first Location Based Services (LBS) capability on a Revision A connection card through an enhanced version of the Sprint Connection Manager software. Users of these cards will be able to perform location based searches to find a nearby restaurant, gas station, bank and other points of interest without having to input their current location. This basic Sprint location and search usage is included as part of Sprint's flexible data and unlimited data connection card plans. Current users can obtain the software by checking for updates using their Sprint Connection Manager, or it can be downloaded from www.sprint.com/downloads.

Plans

Customers signing a two-year Sprint subscriber agreement may be eligible to receive unlimited data usage for \$59.99 per month (no separate voice plan required). Other individual service plans for all mobile broadband devices currently range from \$39.99 per month for 40 MB to \$79.99 per month for unlimited data usage with a one year subscriber agreement. Rates apply to all Power Vision users and do not change in areas that have been upgraded to EV-DO Revision A.

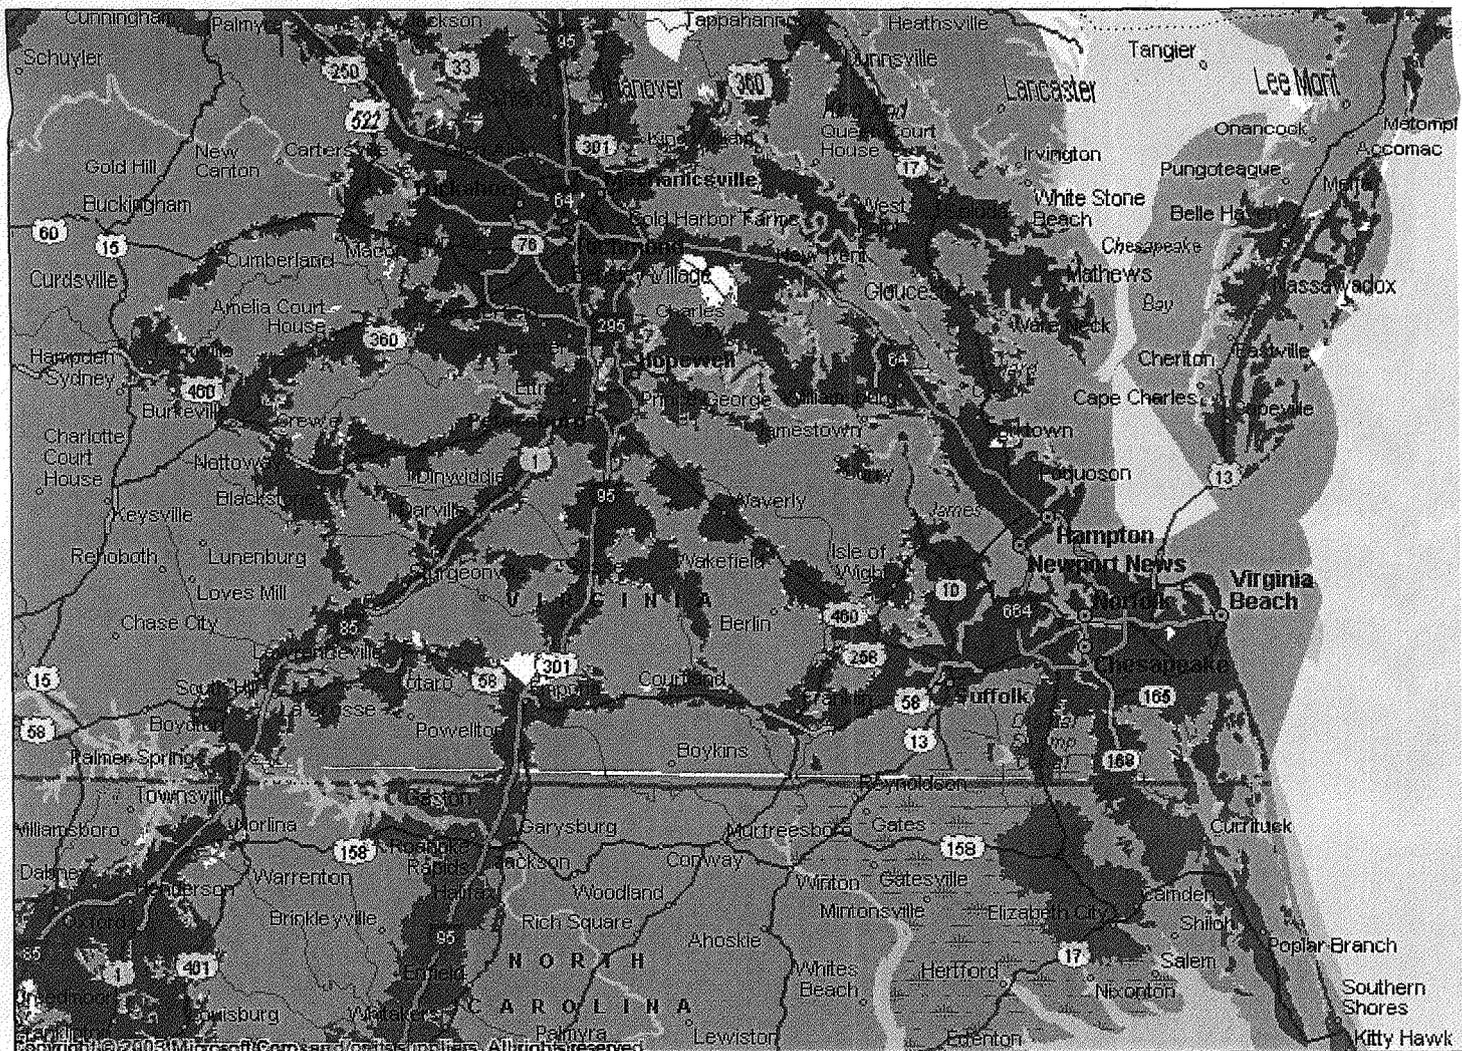

Additional information on the Sprint Mobile Broadband Network, including coverage maps showing current and future coverage, Mobile Broadband service plans, and the latest access devices, can be found at <http://powervision.sprint.com/mobilebroadband/>.

About Sprint Nextel

Sprint Nextel offers a comprehensive range of wireless and wireline communications services bringing the freedom of mobility to consumers, businesses and government users. Sprint Nextel is widely recognized for developing, engineering and deploying innovative technologies, including two robust wireless networks serving 53.1 million customers at the end of 2006; industry-leading mobile data services; instant national and international walkie-talkie capabilities; and an award-winning and global Tier 1 Internet backbone. COMPANY BACKGROUND

AccessNet is owned in part by Atlantic Communications, an industry leader since 1963. Atlantic Communications is committed to providing for our customers' needs. Whether you need top-of-the-line communications equipment, custom installation, or expert technical service, we are here to provide for your needs.

This is a result of a merger with Access Paging and Hampton Roads Family Net. The focus is Wireless, high-speed Broadband access to the Internet. Our system offers access speeds up to 3Mbps. We use wireless radio to transmit rather than traditional telephone lines, which equates to much faster, more reliable service.

AC offers several different maintenance plans, from business day to 24-hour continuous system maintenance, ranging from pay-as-you-go service to our comprehensive maintenance contract service. You chose the plan that is best for you. Just another way that we try to keep our customers happy. For more information, please visit our corporate site at www.atlanticcom.net
