Comcast's blatant and deceptive blocking of peer-to-peer communications is exactly the problem millions of Americans have warned would occur without Net Neutrality protections. The FCC must take serious and immediate action to put an abrupt end to this harmful practice and prevent other Internet service providers from following Comcast's example of discriminating against the free flow of online information. The Internet is a vital engine for economic growth, civic participation and free speech. We simply can't allow corporate gatekeepers to smother these democratic communications by discriminating against new technologies, secretly interfering with Internet traffic and stifling innovation.

Jonathan Bazemore
PO Box 548
Crosby, ND 58730

FCC: I understand that the Comcast company, and a small group of media corporations, wish to shape internet traffic, in effect censoring certain types of data. I object to Comcast doing that, and I object to any group of corporations, particularly a small, dominant group with the same interests, said interests running contrary to the public's openly stated interests. I also am led to believe that the Comcast company used some repugnant tactics recently by filling a Harvard auditorium, where a public hearing about internet issues was being held, with "floorfillers", or people given cash remuneration for showing up and sleeping, preventing interested citizens from expressing their opinions at the meeting, and I object to that, too. Hands-off is the best approach to a large, self-regulating cyber-community like the internet, but Comcast's activities could end up destroying the backbones with anything from a complicated plethora of tax-like fee structures to outright censorship of politically-inconvenient data. If the FCC is to retain a pivotal role in public policy, it must assert itself as the People's advocate only wherein basic standards of technical interconnectedness apply, and I do believe that this is one of those situations. Sincerely, Jonathan Bazemore. Feb-27-2008
