Dear Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use our public spectrum to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

Mr. Nick Lutsch
133 Lakehurst Dr
Eastlake, OH 44095-1153

Robert McDowell
Commissioner, Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Dear Robert McDowell:

RE: FCC Proceeding 07-195

As you consider the service rules for the 2155-2175 MHz spectrum band, please make delivery of free and family-friendly wireless broadband (with service rule requirements to ensure it is available to at least 95% of the population) mandatory for any license holder.

We are living in an era where many Americans are struggling to make ends meet, where living costs are on the rise, and where by any objective measure, we are falling embarrassingly behind other countries in the deployment of broadband technology.

A free and universally available service would bring hope and opportunity to many Americans and would raise our economic competitiveness to the benefit of all Americans. Therefore, I encourage you to do everything in your power to move the machinery in Washington D.C. toward this important goal.

Please act today.

Sincerely,

Chihming Chen

Dear Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use our public spectrum to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

Mr. Justin Hurst
