**EX PARTE NOTICE**

**Re: WT Docket No. 07-195, Service Rules for Advanced Wireless Services in the 2155-2175 MHz Band and WT Docket 04-356, Service Rules for Advanced Wireless Services in the 1915-1920 MHz, 1995-2000 MHz and 2175-2180 MHz Bands**

Dear Ms. Dortch:

On May 29, 2008, Joan Marsh, Jeanine Poltronieri, Michael Goggin and David Shively, of AT&T, met jointly with staff of the Office of Engineering and Technology and the Wireless Telecommunications Bureau of the Federal Communications Commission. Representing the FCC were Ira Keltz, Geraldine Matise and Pat Forster from the OET and Joel Taubenblatt, Blaise Scinto and Peter Daranco represented the Wireless Telecommunications Bureau. AT&T discussed the ongoing proceedings involving spectrum at 2155-2175 MHz and in the 1915-1920 MHz, 1995-2000 MHz and 2175-2180 MHz bands

Consistent with its filed comments in these proceedings, AT&T expressed its view that the Commission should ensure that appropriate controls are put in place to prevent interference into the PCS and AWS-1 bands. With regard to the H block, AT&T expressed its views that technical limitations must be adopted for mobile transmissions, including out-of-band-emission limits and power limits. With regard to the use of spectrum at 2155-2180 MHz, AT&T has concluded that the downlink only model offers the best means of alleviating interference to adjacent AWS-1 devices. If the Commission decides to allow mobile transmissions in the 2125-2180 MHz band, it must structure the allocation to provide separation from the AWS-1 band and the mobile transmit in 2125-2180 MHz. In addition to making a structured allocation, stringent limits on out-of-band emissions and power would also be needed.

In accordance with section 1.1206(b)(2) of the Commission's rules, this letter is being filed electronically with your office, please place a copy of this letter in the dockets of the above captioned proceedings.

Sincerely,

/s/ Jeanine Poltronieri
