

Comcast cable has got to be the worst and slowest service available in America. I am surprised that the FCC allows them to operate in Michigan. I get high prices for service and low quality, slow internet speeds. They constantly advertise that they have high speed service but this is not true. They have not had an equipment improvement in my area in over 10 years. How can they continue this bait and switch tactic? I get the run-around each time I talk to a customer service rep. This is a crime that needs to be addressed. I filed complaint #08-C00024309 with the FCC on June 2 2008.
