

facilities could be reconfigured to support the provision of these 21st century services for the use of its students, faculty and administration.

According to the Applications, the proposed transaction will allow the parties to combine their respective 2.5 GHz licenses and lease rights, and attract the capital necessary to deploy a fourth-generation wireless broadband network across the country, using WiMAX technology. The expeditions deployment of this network "will bring services to 140 million people in the United States in thirty months,"¹ resulting in increased competition in the provision of broadband services and more intensive and efficient use of the 2.5 GHz band.

New Trier supports the proposed transaction because expediting the deployment of these services will directly advance its education mission, enabling it to incorporate state-of-the-art communication applications in the day-to-day education of its students.

Respectfully submitted,

NEW TRIER HIGH SCHOOL DISTRICT 203
