

I am using MStar Metro High Speed internet service. I am apart of a program to test software and have to use torrent peer-to-peer programs to download this software. MStar is limiting my download speeds when using these programs. I have called their technical support at 1(877)678-2763 and one of their techs had told me himself that they are limiting the torrent connections. I read about Comcast Throttling BitTorrent Traffic and now this ISP is doing the same thing. Than you for you time.

P.S. MStar's webstie is www.mstar.net
